LED MIRRORS

Construction elements of LED mirrors

6 main construction elements

Acrylic glass - Aluminum frame - Protective layer, glass 5mm - Aluminum power supply cover - Built-in LED diodes

LED Mirror control

Turning off or on of the mirror
An important aspect which effect of choosing of the LED mirror is a way of turning on of the mirror lights. There is possible to choose from mirrors without a touch sensor or with it.

Mirrors without touch sensor:

Mirrors without touch sensors are connected as any other lights in the bathroom to the switch in the wall. This is therefore a classic rocker switch. In this case, will mirror light up with other lights in the bathroom. There is also the possibility to split lighting using a dual rocker switch.

Advantages: By entering your bathroom you can easily light up your mirror with other lights in the room. There is not required another turning on of the mirror.

Disadvantages: There is no possibility of setting color temperature 2700 - 6000 K. It is not suitable for users who request lighting of the mirror just at the moment when they use it.

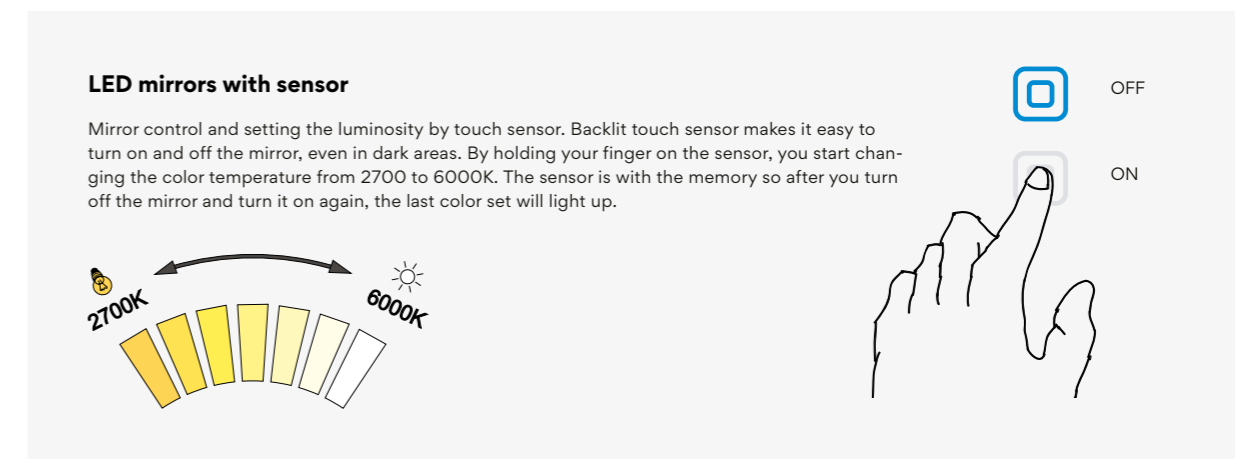

Mirrors with touch sensor:

Mirrors with touch sensor turn on by its sensor located directly on the mirror glass. It turns on with a touch of a finger. One short touch and the mirror is on or off. By holding a finger on the touch sensor longer you adjust the color temperature from warm white 2700K to colder white 6000 K. The mirror has its memory so it gets to remember your last settings. In case of power failure, the mirror has to be adjusted again.

Advantages: Possibility of setting color temperature. Turning on of mirror only during of using it. It is perfect for new technology lovers.

Disadvantages: It is controlled by the touch sensor on the mirror compared to the switch which is more comfortable because it is usually located by an entrance to the room. Less suitable for users who want to use the mirror also like additional light in the bathroom or as a decorative, ambient lighting.

Novelties

We have prepared a new round mirror model for you:

Round mirrors with a narrow illuminated strip around the entire perimeter. It looks modern and very elegant. Mirrors are suitable for modern and industrial style bathrooms. Model 28000 round mirrors with a diameter of 60 and 80 cm with a black frame around the perimeter.

Model 28000R

The NIMCO mirror range must also include round models. Model 28000R is a stylish mirror designed to the smallest detail, which will become an original piece in your bathroom.

MODEL 28000R

LED mirrors with acrylic backlight

NIMCO LED backlit mirrors are characterized by the improved luminosity thanks to the satinated acrylic glass which is placed under the backlit part of the mirror. Acrylic glass helps intensify and diffuse the light and together with the built-in innovative LED chips 2835 it provides almost perfect homogenous lighting. The first models with this innovative concept started to be developed in 2016 and they were introduced to Czech market a year later. Modern mirror designs offer models with rounded edges or sharp edges or the round variant. Each model is stated in variable sizes.

Innovative 2835 chips guarantee better power in comparison to their forerunners and thanks to the higher thermic resistance and improved cooling they ensure long lifespan which reaches up to 50.000 hours. Chips placement is different for each model either 90 chips / meter or 120 chips / meter which ensures high-quality steady lighting.

Construction made of aluminium frame prevents any corrosion and it is ideal to humid bathrooms ensuring long lifespan. Aluminium as non-corrosive material is also used as material for covering all electronic elements mainly the power supply.

The mirror is 5 mm thick which makes it durable. This safety element is appreciated mainly by the families with kids.

Mirrors with the protection IP 44 are suitable even to humid rooms like bathrooms. IP 44 provides protection against splashing water. However, even with this protection the mirror cannot be placed everywhere in the bathroom. We recommend following the instructions and placing it to the suitable zones.

It is possible to choose among the mirrors with touch sensor with setting the color temperature and with the memory or mirrors without the sensor whereas it is connected to electricity and controlled by the switch of the lights.

Backlit touch sensor makes it easy to turn the mirror on and off even in dark places. Holding your finger on the sensor allows regular transition between colors. The setting is possible among 2700 K - 6000 K. The sensor is with a memory, so after turning off and on again the last set color will light.

Mirrors without the touch sensor can be attached horizontally or vertically and therefore it fits into your interior according to your idea. The installation can be easily done in accordance with the instructions.

Model 27000R

Elegant mirror of modern round shape with a soft backlit stripe around the perimeter. The 27000R will be a functional mirror and at the same time a design accessory in every bathroom.

LED mirrors with frame

The mirror which fits into each bathroom thanks to its austerity and sophistication. Models 13000 have visible aluminium frame which is offered in brushed surface finish or black matt. LED diodes are built-in to the frame and placed around the whole perimeter and covered by 8mm frame. This favorite model is available in standard sizes.

Innovative 2835 chips guarantee better power in comparison to their forerunners and thanks to the higher thermic resistance and improved cooling they ensure long lifespan which reaches up to 50.000 hours. Chips placement is different for each model either 90 chips / meter or 120 chips / meter which ensures high-quality steady lighting.

Construction made of aluminium frame prevents any corrosion and it is ideal to humid bathrooms ensuring long lifespan. Aluminium as non-corrosive material is also used as material for covering all electronic elements mainly the power supply.

The mirror is 5 mm thick which makes it durable. This safety element is appreciated mainly by the families with kids.

Mirrors with the protection IP 44 are suitable even to humid rooms like bathrooms. IP 44 provides protection against splashing water. However, even with this protection the mirror cannot be placed everywhere in the bathroom. We recommend following the instructions and placing it to the suitable zones.

It is possible to choose among the mirrors with touch sensor with setting the color temperature and with the memory or mirrors without the sensor whereas it is connected to electricity and controlled by the switch of the lights.

Backlit touch sensor makes it easy to turn the mirror on and off even in dark places. Holding your finger on the sensor allows regular transition between colors. The setting is possible among 2700 K - 6000 K. The sensor is with a memory, so after turning off and on again the last set color will light.

Mirrors without the touch sensor can be attached horizontally or vertically and therefore it fits into your interior according to your idea. The installation can be easily done in accordance with the instructions.

Model 13000

We would like to present you next model of the mirror which fits into any bathroom thanks to its simplicity and perfect design. The model 13000 has LED diodes around the whole perimeter covered by 8mm frame. High performance LED diodes ensure carefree daily hygiene.

LED mirrors standard

NIMCO mirrors of standard sizes for everybody who likes to stick to classic style. With the following models you bet on certainty in the form of elegant mirrors suitable to each bathroom. Delicate and thin LED strip placed on two sides of the mirror or directly in the mirror brings pleasant lighting into the room. The models are without the sensor, connected directly to electric power distribution. Turning on and off is performed through the main switch of the light in the room.

Innovative 2835 chips guarantee better power in comparison to their forerunners and thanks to the higher thermic resistance and improved cooling they ensure long lifespan which reaches up to 50.000 hours. Chips placement is different for each model either 90 chips / meter or 120 chips / meter which ensures high-quality steady lighting.

Construction made of aluminium frame prevents any corrosion and it is ideal to humid bathrooms ensuring long lifespan. Aluminium as non-corrosive material is also used as material for covering all electronic elements mainly the power supply.

The mirror is 5 mm thick which makes it durable. This safety element is appreciated mainly by the families with kids.

Mirrors with the protection IP 44 are suitable even to humid rooms like bathrooms. IP 44 provides protection against splashing water. However, even with this protection the mirror cannot be placed everywhere in the bathroom. We recommend following the instructions and placing it to the suitable zones.

Model 9000

Next model with sharp edges for lovers of classic style. Universal shape and choice of sizes of the model 9000 pleases everyone who bets on conservativeness. The mirror is illuminated by thin LED strips hidden in PVC tube which is placed under sanded sides of the mirror. 9 mm thin LED strips provide pleasant lighting.

Nava

chrome / black

Smooth lines, rounded edges, modern style. Connecting these characteristics you create enchanting series NAVA. NAVA is a combination of matt black, chrome and containers made of sated glass and it completely emphasizes modern design of your bathroom. If you long for a change but you want to keep restrained style, choose NAVA.

KIBO BLACK

Kibo

black

Minimalism, elegance, timelessness? The black in interiors can comprise all of these aspects. Black shouldn't rule the bathroom. However, in combination with white it creates a unique space. If you still hesitate to use black then begin with accessories KIBO.

Keira

chrome

A modern bathroom is a combination of common and private zones. It is flexible and thus even in limited time and space it allows to meet requirements of every member in a household. KEIRA series is a combination of modern technology and creativity. As a whole it creates a mosaic of trends, it is sharp and dignified, technical and with no compromises.

LED MIRRORS

Acrylic glass
Acrylic glass helps intensify and diffuse the light which causes almost perfect homogenous lighting. This innovative concept leads the light through finely but precisely crafted transparent acrylic frame on the sides of the mirror.

High-quality of surface finish mirrors
NIMCO mirrors are not only stylish pieces but also they offer high-quality surface finish and craftsmanship.

Aluminium cover of power supply
Aluminium as non-corrosive material is also used as the material for covering all electric components especially power source.

Lifespan of LED chips
LED chips have a lifespan of 50.000 hours. Innovative LED chips 2835 have higher thermic resistance and improved cooling which significantly extends their service life.

Switch
The mirror is connected to electricity. Turning on and off is performed through the main switch of light in the room.

Range of temperature lighting 2700 - 6000 K
Most models without the switch offer the color temperature of 6000 K, the so called „cool white“ which is the bright midday light suitable to modern bathrooms. The range of mirrors offers also the one with warm light - 2700 K. If you do not like to think it over but you prefer to have a choice, then the models with touch sensor are optimal solution allowing you to change color temperature from 27000 to 6000 K.

Vertical and horizontal mirror position
Mirrors without the touch sensor can be placed vertically and horizontally so they could easily fit into your interior according to your ideas. The installation can be done easily according to the instructions.

Drilling
The products are assembled by drilling

Aluminium frame
The mirror consists of mirror glass and quality aluminium frame which is elegantly worked.

5mm glass
The NIMCO mirror glass is 5 mm which makes them more resistant. Especially households with kids appreciate this safety feature.

LED diodes
The chips are placed 90 chips / meter or 120 chips / meter which ensures high-quality and uniform lighting.

LED chips 2835
Compared to their forerunners, innovative chips 2835 guarantee high performance and long lifespan, which is up to 50.000 hours.

IP 44 protection
Mirrors with the protection IP 44 are suitable even to humid rooms like bathrooms. IP 44 provides protection against splashing water. However, even with this protection the mirror cannot be placed anywhere in the bathroom. We recommend following the instructions and placing it to the suitable zones.

Backlit touch sensor
Backlit touch sensor makes it easy to turn on and off the mirror, even in dark areas. By holding your finger on the sensor, you start changing the color temperature from 2700 to 6000 K. The sensor is with the memory so after you turn off the mirror and turn it on again, the last color set will light up.

BATHROOM ACCESSORIES

Brass
H59 Brass
H63 Brass

Stainless steel
Stainless steel

Zinc alloy
Zinc alloy resistant to corrosion
Zn

EXTRAWHITE
Extra clear glass. Compared to ordinary glass, this glass is completely clear, thus colorless. Its absolute whiteness is highlighted by its matt surface on both sides. The glass is 8 mm thick.

PLEXIGLAS 
Shelves are made of special snow-white translucent plexiglass with velvety matt surface finish on both sides.

Abs plastic
Harmless polymer durable resistant to mechanical damage
ABS

Artificial stone
Shelves made of artificial stone

Polyresin
Type of synthetic resin

Bamboo
Resistant and solid grass suitable for production of various objects

Steel
Classic steel is used for products with surface finish powder varnish.

High-quality surface finish

Easy cleaning
Assembly system allowing taking out the product easily. This simplifies cleaning the product and its surrounding behind.

Sticking
The products are assembled by sticking

Drilling
The products are assembled by drilling

Protection against fingerprints
Special layer which does not leave fingerprints after the touch.

Volume 5 l
5 l volume suitable to family bathrooms and hotels.

Pedal dust bin
Dust bin controlled by the pedal. No need for touch of the hands.

Soft closing
Dust bin with slow and soft closing system.

Aluminium
ALU Aluminium

Soft touch
Special additional surface treatment. The surface is soft, pleasant to the touch.
